Any solution would do as long as it works for Windows 7. I am running Windows 7. A: I would use the zipfile module: `import zipfile f = zipfile.ZipFile("path/to/some.zip")` This will work for a ZIP archive containing a directory. For a ZIP archive containing an EXE or DLL (although, of course, there are a few exceptions), you should use the archive module. Featured Database Articles Overview of Date and Time Functions in SQL Server The date and time functions available in SQL Server include the following: Examples The following example retrieves the current date and time, and extracts the day, month, and year components of the date and 82157476af
